

BUG KEEPER

ABK-1904C ABK-1002C ABK-650

A Bug Keeper featured with Pesticide-free keeps the human and the environment safe.

BUG TRAPPING MECHANISM

The Bugs will be attracted by the lamp and the Bug Keeper will keep them inside.

1 ATTRACTION

A light that is similar to UV light is used to attract those phototaxis bugs.

3 TRAPPING

The bugs are isolated from outside environment and the design prevent the bugs from flying out.

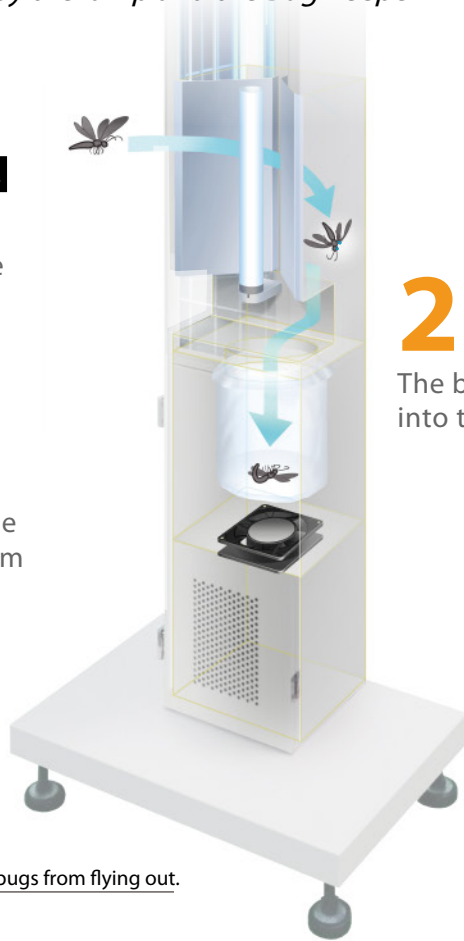

The bugs are kept in the bag. The bag is reusable after cleaning.

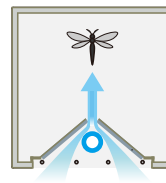

The trapped bugs. This bag prevents the bugs from flying out.

The trap bag after using

2 SUCTION

The bugs are introduced into the machine.

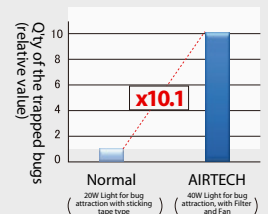

SLICE VIEW

The unique design of the entrance prevents the bug from flying out.

THE STRONG BUG TRAPPING ABILITY

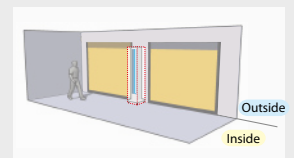

This can be used at the entrance of the factories. Compared with the efficiency of the normal trapping device, our Bug Keeper performs 10 times better.

*The above information is from the testing report of our lab

WITH THE TALL AND SLIM DESIGN, IT IS SPACE SAVING.

This Bug Keeper can be used in a limited space because of its compact design. With casters, it is easy to be moved around.

THE SERIES OF THE BUG KEEPER

With various of types, it can be used in different environment.
